

ADP300 ADP305 High Voltage Differential Probes

Key Features

- 20 MHz and 100 MHz bandwidths
- 1,000 VRMS common mode voltage
- 1,400 Vpeak differential voltage
- EN61010 Cat III
- 80 dB CMRR at 50/60 Hz
- ProBus® system
- Full remote control

ADP30X high-voltage active differential probes are safe, easy-to-use probes ideally suited for measuring power electronics. The ADP300 is good for troubleshooting low-frequency power devices and other circuits where the reference potential is elevated from ground or the location of ground is unknown. The ADP305 is designed for measuring the high-speed floating voltages found in today's power electronics.

Easy-to-use

With the ProBus interface, the ADP30X becomes an integral part of the oscilloscope. The attenuation, offset, and bandwidth limit are all controlled from the oscilloscope front panel or by using the remote control commands. This means the complete measurement setup can be saved and recalled by the oscilloscope, and all measurement values will be correct. The scope provides power to the probe, so there is no need to worry about a separate power supply or changing batteries.

Autozero

The ADP30X offset can be easily set to zero by pushing a button in the oscilloscope's coupling menu, even when connected to live circuits. This makes it easy to get accurate measurements.

Meets EN61010 Category III requirements

Safety is the top priority when you work around high-voltage signals. The ADP300 and ADP305 are both designed to the standards required for Installation Category III. This means in addition to being used on appliances and portable equipment (Cat II), they can be used in fixed-installation environments.

SPECIFICATIONS & ORDERING INFORMATION

Specifications

•	ADP300	ADP305
Electrical Characteristics		
Bandwidth	20 MHz	100 MHz
Differential Voltage	1400 v peak	
Common Mode Voltage	1000 vrms Cat II	I
Best Low-Frequency Accuracy (probe only)	1% of reading	
CMRR	50/60 Hz 80 dB (10,000:1)	100kHz 50 dB (300:1)
Max. Slew Rate (referenced to input)	60,000 V/us	300,000 V/us
AC Noise (referenced to input)	50 mVRMS	
Attenuation	÷100/÷1000 (au selected by scop	
Input Impedance	Between inputs $8 \text{ M}\Omega$, 6 pF	Each input to ground 4 MΩ, 1 pF
Sensitivity	1 V/div to 350 V/div	200 mV/div to 350 V/div

General Characteristics

Overall Length	2 meters
Input Connectors	4mm shrouded banana plug
Operating Temperature	0° C to 50° C
Max Altitude	2000 meters
Max Relative Humidity	80% (max 31° C)
Warranty	One year

Standard Accessories	
Instruction Manual	ADP300
Certification of Calibration	
Plunger Hook Clip (1-Red, 1-Blu	e)
Straps for Holding Probe	
All ADP300 Accessories	ADP305
Safety Spade (1-Red, 1-Blue)	
Plunger Clamp Clip (1-Red, 1-Bl	ue)
Plunger Jaw Clip (1-Red, 1-Blue	
Safe Alligator Clip (1-Red, 1-Blue	2)
Soft Accessory Case	

Ordering Information

Product Description	Product Code
1,400 V, 20 MHz High-Voltage Differential Probe	AP300
1,400 V, 100 MHz High-Voltage Differential Probe	AP305
Plunger Hook Clips (Quantity 2 - 1 Red, 1 Blue)	PK30X-1
Safety Alligator Clips (Quantity 2 - 1 Red, 1 Blue)	PK30X-2
Plunger Jaw Clips (Quantity 2 - 1 Red, 1 Blue)	PK30X-3

Customer Service

Teledyne LeCroy oscilloscopes and probes are designed, built, and tested to ensure high reliability. In the unlikely event you experience difficulties, our digital oscilloscopes are fully warranted for three years and our probes are warranted for one year. This warranty includes:

- No charge for return shipping
- Long-term 7-year support
- Upgrade to latest software at no charge

High Voltage Differential Probes HVD3605, HVD3206 HVD310x

Key Features

- 1 kV, 2 kV, 6 kV CAT safety rated models
- World's only 1500 V_{dc} safety rated probe per IEC/EN 61010-031:2015
- Widest differential voltage ranges available
- Exceptional common-mode rejection ratio (CMRR) across a broad frequency range
- 1% gain accuracy
- High offset capability at both high and low attenuation
- AC and DC coupling
- ProBus active probe interface with automatic scaling
- Auto-zero capabilities
- Wide oscilloscope compatibility

The HVD3000 series high voltage differential probes provide high CMRR over a broad frequency range to simplify the measurement challenges found in noisy, high common-mode power electronics environments. The probe's design is easy-to-use and enables safe, precise high voltage floating measurements.

Exceptional Common-Mode Rejection Ratio

The CMRR for the probes is exceptional out to very high frequencies, greatly improving measurement capability in the noisy, high common-mode environments found in power electronics. The high CMRR combined with low probe noise and high offset capability allows measurement of very small control signals floating on high common-mode voltages.

High Precision Measurements

HVD3000 series probes provide 1% gain accuracy enabling precise voltage measurements. AutoZero capability ensures further measurement precision by allowing small offset drifts to be calibrated out of the measurement.

Widest Application Coverage

The HVD3000 series of high voltage differential probes cover the fullest range of applications, from 120/240 V switch-mode power supplies through 600 V class and 5 kV class electrical apparatus, Each model has the best gain accuracy, widest differential and offset voltage range, and superior CMRR.

World's Only 2 kV Rated Probe

The HVD3206 is specifically designed for $1500 \, \text{V}_{\text{dC}}$ solar photovoltaic (PV) measurements per the IEC/EN 61010-031:2015 standard.

Complete Probe Integration

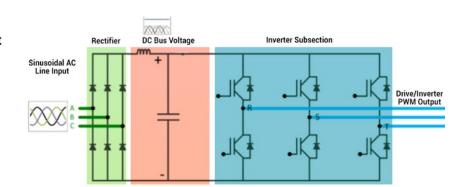

The ProBus interface provides power and communication to the probe eliminating the need for a separate power supply or batteries. Attenuation is automatically selected based on oscilloscope gain range (V/div) setting.

WIDE APPLICATION COVERAGE - 600 V TO 5 KV APPARATUS

600 V Class, 3-phase Electrical Apparatus

The HVD310x probes are available in a range of bandwidths from 25 to 120 MHz with standard 2 meter cable (6 meter cable model available). All probes have industry best CMRR for best noise-immunity, are guaranteed to 1% gain accuracy, and have the industry's widest differential voltage range in a 1 kV rated high voltage differential probe.

- Only 1 kV safety rated probe that serves the full 600 V class requirement
- 1500 V differential range with industry's best overshoot measurement capability (to 2000 V_{pk})
- Industry's best offset capability (1500 V) when used with HDO Series oscilloscopes
- Bandwidth rating up to 120 MHz
- 6 meter cable model available (HVD3106-6M)
- Ideal voltage range and performance for Gate drive probing
- Models available without accessories for a lower cost (HVD310x-NOACC)

	690	1952	1127	976	976	563	1464	845

*Based on 50% overshoot condition

5 kV Class, 3-phase Electrical Apparatus

The HVD3605 probe is safety-rated for $6000 \text{ V}_{\text{rms}}$ and 8485 V(DC + peak AC) for full coverage of 5 kV class apparatus. The probe has ample 100 MHz of bandwidth, is standard with a 6 meter cable, is guaranteed to 1% gain accuracy, has excellent CMRR, and has the industry's widest differential voltage range.

- Only probe that permits AC Line, DC Bus, and Drive/Inverter output voltage probing through 4160 V apparatus ratings
- Industry's best overshoot measurement capability (to 7600 V_{Dk})
- Industry's best offset capability (6000 V) when used with HDO Series oscilloscopes
- Standard 6 meter cable

WORLD'S ONLY 2 KV SAFETY RATED MODEL

Solar PV Inverters

The HVD3206 probe is rated to 1500 V_{dC} (2000 V DC + peak AC). This makes the probe ideal for testing single-phase or three-phase inverters or newer 1500 V_{dC} rated string-inverters (per IEC/EN 61010-031:2015). The HVD3206 has the same excellent 1% gain accuracy, industry-leading CMRR, industry-best offset range, standard 2 meter cable (6 meter cable model available), and a guaranteed 2000 V_{pk} differential voltage range.

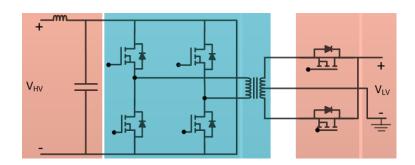

Solar String DC Bus Voltage	Sinusoidal AC Output			
	V _{pk} (F	Rated)	V _{pk} (with C	overshoot)*
V _{dc}	Line-Line	Line- Neutral	Line-Line	Line- Neutral
1000	849	490	1104	637
1500	849	490	1104	637

*Based on 30% overshoot condition

- Only 1500 V_{dc} safety rated probe per IEC/EN 61010-031:2015
- Guaranteed 2000 V_{pk} differential voltage range
- Industry's best offset capability (1500 V) when used with HDO Series oscilloscopes
- Bandwidth rating up to 120 MHz
- 6 meter cable model available (HVD3206-6M)

DC-DC Converters

High-power DC-DC converters can operate at substantial voltages, $500 \, V_{dC}$ or higher. The HVD310x models provide up to $1000 \, V_{dC}$ common-mode (HVD3206 models provide up to $1500 \, V_{dC}$) and high precision (1% gain accuracy) DC voltage measurements. Automatic switchable attenuation keeps the probe in the optimum measurement range. Multiple probes can be used to understand complex device switching performance.

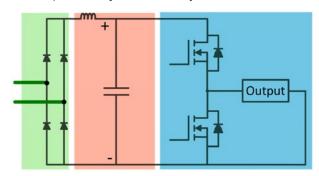

- Common mode range up to ±2000 V (DC + peak AC) with HVD3206
- High precision 1% accuracy
- Automatic gain switching for optimum performance

SUPERIOR PERFORMANCE AT LOWER VOLTAGES

120 V / 240 V Half-Bridge Circuit Topologies

Single-phase switch-mode power supplies and other devices utilizing half-bridge topologies need test and validation at DC bus voltages up to 340 V_{dC} with up to 680 V_{p-p} on the input voltage. HVD310x probes are cost-effective solutions for probing the wide range of high voltage signals present in these systems. "No Accessory (NOACC)" versions of these probes permit additional cost savings. Use your existing accessories or purchase just the ones you want.

- High precision 1% accuracy
- Automatic gain switching for optimum performance

Input Voltage (Vrms or Vac)	Input Voltage (Vpk-pk)	DC Bus Voltage (Vdc)	Output PWM Voltage (Vpk)
120	340	170	170
240	680	340	340

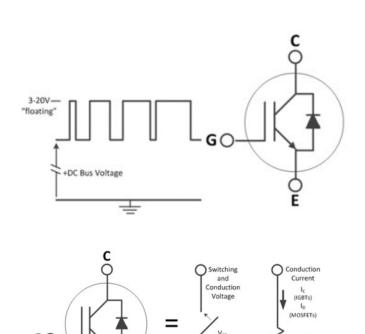

MOSFET/IGBT Devices

Gate Drive Voltage Measurements

Typically from 3 to 20 volts and "floating" at up to the DC Bus voltage. Safe and accurate measurements require a probe that is safety rated to the full DC bus voltage, has low additive noise, excellent CMRR, and a suitable low-voltage gain range with very high offset capability. The HVD Series probes provide all of these capabilities.

Device Analysis

Conduction loss or Rds(on) measurements require a voltage probing solution that has high CMRR, fast overdrive recovery, voltage clamping (so the oscilloscope is not overdriven), compensation flatness, gain/amplification to see small signal details, and precise offset generation to see the switching device's turn-off performance. For this type of analysis, the Teledyne LeCroy DA1855A Differential Amplifier is the best solution. It provides 100 MHz bandwidth, excellent common mode rejection ratio (CMRR) of 100,000:1 (typical), and overdrive recovery to within 100 mV from a 400 V input signal in less than 100 ns.

Low Ω for

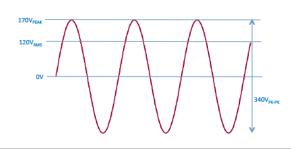

(IGBTs)

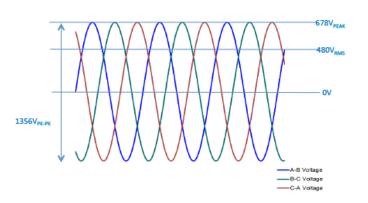

UNDERSTANDING HV DIFFERENTIAL PROBE RATINGS

AC line voltages and power electronics systems can operate at very high voltages, and all parts of the measurement circuit are not necessarily connected to ground, requiring HV safety ratings. Additionally, a variety of terms may be used to describe the same voltage. Below is a simple tutorial to help you understand the various types of voltage terms and how they relate to each other. Understanding these voltage terms is necessary to ensure the correct probe selection.

Single-phase AC Line Input

Ratings are provided in V_{rms} (also referred to as V_{ac}) referred Line-Neutral. AC Line inputs are usually grounded and these voltages can be assumed to have a 0V reference voltage. V_{peak} is calculated as $\sqrt{2} V_{rms}$ and V_{pk-pk} is calculated as $2 V_{peak}$. The example to the right is for a 120 V_{rms} rating.

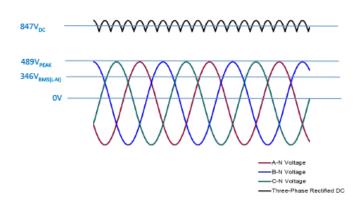

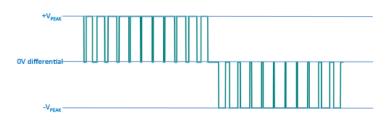

Three-phase AC Line Input

Ratings are provided in V_{rms} (also referred to as V_{ac}) referred Line-Line (L-L), which can be converted in magnitude to a Line-Neutral basis by dividing by $\sqrt{3}$. V_{peak} (L-L) is calculated $\sqrt{2} V_{rms}$ and V_{pk-pk} is calculated as $2 V_{peak}$. The example on the left is for a 480 V_{rms} three-phase rated system with signals shown as Line-Line.

Rectified AC (DC Bus/Link Voltage)

For three-phase inputs, the three Line-Neutral (L-N) AC Line inputs are rectified and summed to provide a "stiff" DC (bus/link) voltage for the input to an inverter subsection. The example shown to the right is for a 600 V_{rms} system. The Line-Neutral RMS voltages are 600V/ $\sqrt{3}$, and each V_{peak}(L-N) is calculated as $\sqrt{2}$ *V_{rms}. The DC bus voltage after rectification and filtering is equal to $\sqrt{3}$ *V_{peak}(L-N), or 847 V_{dC} in this case.

Inverter or Drive H-Bridge or Cascaded H-Bridge Outputs

The nominal peak voltage (+ or -) of the PWM signals without accounting for signal overshoot is equal to the DC bus voltage. The measured 0V differential voltage value is not ground-referenced, and therefore a differential probe suitably rated to the DC bus voltage is recommended. Note that the +Vpeak and -Vpeak plus overshoot safety margin (typically $\sim 50\%$) is what the HV differential probe must measure - Vpk-pk (2*Vpeak) will never occur in the circuit.

Bandwidth	120 MHz	80 MHz	100 MHz		
Rise Time (10-90)	2.9 ns	4.4 ns	4.3 ns		
Differential Voltage Range (High Attenuation)	2000 V (DC + peak AC) from 7 to 500 V/div	2000 V (DC + peak AC) from 7 to 500 V/div	7000 V (DC + peak AC) from 28V/div to 2000 V/div		
,	with up to 1500V offset.	with up to 1500V offset.	with up to 6000V offset. (7600 V maximum measurable differential voltage before saturation)		
Differential Voltage Range (Low Attenuation)	27.6 V (DC + peak AC) from 100 mV/div to 6.9 V/div with up to 150V offset.	27.6 V (DC + peak AC) from 100 mV/div to 6.9 V/div with up to 150V offset.			
Common Mode Voltage Range	±2000 V (DC + peak AC)	±2000 V (DC + peak AC)	±7600V (DC + peak AC), 6000 Vrms		
Maximum Input Voltage to Earth	±2000 Vpk (nominal, either input to ground)	±2000 Vpk (nominal, either input to ground)	±7600 Vpk (nominal, either input to ground)		
Max Safe Input Voltage	2000 V (DC + peak AC) CAT I * 1500 Vdc CAT III 1000 Vrms CAT III	2000 V (DC + peak AC) CAT I * 1500 Vdc CAT III 1000 Vrms CAT III	8485 V (DC + peak AC) CAT I * 6000 Vrms CAT I * 1500 Vdc CAT III 1000 Vrms CAT III		
Sensitivity	100 mV/div to 6.9V/div (50X) 7V/div to 500V/div (500X)	100 mV/div to 6.9V/div (50X) 7V/div to 500V/div (500X)	300 mV/div to 27.5 V/div (200X) 28 V/div to 2000 V/div (2000X)		
Gain Accuracy		1% (LF, guaranteed)			
Slew Rate	400 V/ns (maximum)	270 V/ns (maximum)	1000 V/ns (typical)		
Attenuation	50x / 500x	50x / 500x	200x / 2000x		
Input Impedance	10 MΩ 2.5 pF (between inputs) 5 MΩ 5.0 pF (either input to ground)	10 MΩ 2.5 pF (between inputs) 5 MΩ 5.0 pF (either input to ground)	48 MΩ 2.5 pF (between inputs) 24 MΩ 5.0 pF (either input to ground)		
Input Coupling		DC only			
Output Coupling		AC or DC coupling			
Output Termination		1 ΜΩ			
Interface		ProBus			
Input Lead Length Cable Length (input lead	2.25 m	40 cm input lead length 6.8 m	6.8 m		
to oscilloscope connection)	2.20111	0.6111	0.0111		
Noise and Rejection					
CMRR (Typical)	DC - 60 Hz: 85 dB 1 MHz: 65 dB 5 MHz: 40 dB 20 MHz: 30 dB 100 MHz: 30 dB	DC - 60 Hz: 85 dB 1 MHz: 65 dB 5 MHz: 40 dB 20 MHz: 30 dB 100 MHz: 30 dB	DC - 60 Hz: 85 dB 10 kHz: 70 dB 1 MHz: 64 dB (200x) 1 MHz: 50 dB (2000x) 10 MHz: 40 dB (200x) 10 MHz: 30 dB (2000x) 100 MHz: 30 dB		
Noise (Probe)	50X: <30 mVrms 500X: <150 mVrms (referred to input)	50X: <30 mVrms 500X: <150 mVrms (referred to input)	200x: <65 mVrms 2000x: <320 mVrms (typical, referred to input)		
Environmental					
Temperature (Operating)		0°C to 50°C			
Temperature		-40°C to 70°C			
(Non-Operating) Humidity (Operating)	E9/ +a 909/ DII (Nan C	condensing) up to 30°C, decreasing linea	rly to 4E% DII at E0%		
Humidity (Non-Operating)		on-Condensing), 75% RH above 30°C, 45			
Altitude (Operating)	001) 1111 (000 0) 000	3000 m maximum	WITH ABOVE 40 C		
- (Operating)	When	used with clip accessories, 2000 m max	kimum		
Altitude (Non-Operating)	10,000 m				
Pollution Degree	2, Indoor use only				
Certifications		IFO/FN 61010 001 0015			
CE (LVD Directive 2006/95/EC)		IEC/EN 61010-031:2015			
CE (EMC Directive 2004/108/EC)		IEC/EN 61326-1:2013			
<u>UL Listed</u>		UL 61010-031 (Second Edition)			
cUL Listed	CAN/CSA-C22.2 No. 61010-031-15				

^{*} CAT I per IEC/EN 61010-031/A1:2008. No Rated Measurement Category per IEC/EN 61010-031:2015.

ORDERING INFORMATION

Product Description	Product Code
1 kV, 25 MHz High Voltage Differential Probe with 2 m cable	HVD3102
1 kV, 120 MHz High Voltage Differential Probe with 2 m cable	HVD3106
1 kV, 80 MHz High Voltage Differential Probe with 6 m cable	HVD3106-6M
1 kV, 25 MHz High Voltage Differential Probe with 2 m cable without tip Accessories	HVD3102-NOACC
1 kV, 120 MHz High Voltage Differential Probe with 2 m cable without tip Accessories	HVD3106-NOACC
2 kV, 120 MHz High Voltage Differential Probe with 2 m cable	HVD3206
2 kV, 80 MHz High Voltage Differential Probe with 6 m cable	HVD3206-6M
6 ky, 100 MHz High Voltage Differential Probe with 6 m cable	HVD3605
High Voltage Replacement Accessories Kit (Includes 2 each, 1 Black, 1 Red):	PK-HV-001

Customer Service

Teledyne LeCroy oscilloscopes and probes are designed, built, and tested to ensure high reliability. In the unlikely event you experience difficulties, our digital oscilloscopes are fully warranted for three years and our probes are warranted for one year. This warranty includes:

No charge for return shipping
 Long-term 7-year support
 Upgrade to latest software at no charge

1-800-5-LeCroy teledynelecroy.com

Local sales offices are located throughout the world. Visit our website to find the most convenient location.
